## EcoLingua: Sustainability and Digital Innovation in Language Education

EcoLingua Curriculum: Digitally Enhanced Pedagogy for Integrating Environmental Issues into Language Teaching is an Erasmus+ project aimed at integrating environmental and sustainability-related topics into language teaching through innovative, digitally enhanced approaches. The project brings together partners from Turkey, Spain, Italy, and Lithuania to develop teaching materials and activities that combine language learning with climate change, ecology, and sustainability education. The project also promotes the use of digital tools and gamification to support meaningful and engaging learning experiences for different language proficiency levels (A1–C2).

At the Linguistic, Educational and Intercultural Research 2026 conference, the EcoLingua section will provide a space to discuss research, teaching experiences and practical approaches related to sustainability-oriented language education, digital pedagogy and interdisciplinary collaboration.
